

Lithium Metal (code HS - 2805 19 000 0)

- Battery grade (basic substance content: min 99,9 %).

The shipment of lithium metal is implemented in ingots, cylinders, rods, pellets or foil.

Metal containers package is sealed with polyethylene liner, conforms to international standards and allows transporting goods over long distances without changing the physical and chemical properties of the product. The package can be in other containers as agreed with the customer. It meets all safety requirements, storage and transportation.

Specification	Battery Grade
Li	min 99,9%
Na	max 0,002%
K	max 0,003%
Ca	max 0,03%
Mg	max 0,002%
Mn	max 0,0003%
